

Clinical Data Exchange

Where Patient Care and Technology Work Together

Clinical data exchange allows your practice to securely share important patient information with us.

How we use your patients' clinical data:

- ▶ **Patient Health Programs** – Identify and assess certain clinical conditions of your patients for enrollment in patient health programs offered by Patrius Health.
- ▶ **Improve the Quality of Care** – Create accurate clinical alerts and identify your patients' gaps in care.
- ▶ **Reduction in Chart Review Activities** – Lessen the administrative burden associated with manual chart retrieval.
- ▶ **Physician Reimbursement** – Improve your ability to perform well in our provider incentive program and to maximize your incentive earnings.
- ▶ **Care Reminders** – Allows us to notify you when your patients are admitted to or discharged from a hospital or an emergency department visit.
- ▶ **Simplify Claims Processing** – Automation and access to clinical data for claims can save time, minimize errors and accelerate reimbursement.

How we receive clinical data:

- ▶ Admission, Discharge and Transfer (ADT) Messages
- ▶ Electronic Medical Record (EMR) Feed
- ▶ Biometrics Feed
- ▶ Lab Results Feed
- ▶ eCensus Feed
- ▶ Other EMR Access Feed to Lessen Administrative Burden

Tools available to you that use clinical data:

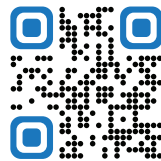

Provider Insights

The Provider Insights online reporting suite assists you and your practice with managing quality of care and provider incentive programs.

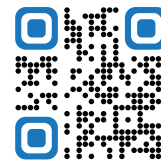

Patient Health Snapshot (PHS)

The PHS provides an overview of your patients' health that includes gaps in care, chronic conditions, diagnoses, recently received healthcare and drug information.

AutoHR360

The Health Risk 360 (HR360) assessment allows you to capture and submit your patients' full picture of health, including chronic conditions and medications.
