

Provider-Administered Drug Review Program (Excluding Oncology)

Blue Cross and Blue Shield of Alabama requires precertification of provider-administered drugs managed under a medical policy. Currently, precertification for these provider-administered drugs is required when administered in a provider's office, outpatient facility or home health setting. If precertification is not obtained, coverage will not be provided under the plan for the provider-administered drug. The [Provider-Administered Precertification Drug List](#) contains the list of drugs subject to the Provider-Administered Drug Review Program.

Online policies can be found by selecting [Provider-Administered Drug Policies](#) under Pharmacy Resources on this website.

Precertification review for provider-administered drugs is performed by Magellan Rx Management Drug Review for non-oncology drugs or AIM Specialty Health for oncology drugs. For information about precertification of provider-administered oncology drugs, refer to the [Oncology Select Program](#).

To facilitate requests for a precertification review for non-oncology drugs, Blue Cross offers a paperless service that streamlines the authorization process with single sign-on functionality. This free online service is available through our partnership with Magellan Rx Management. Precertification can be initiated by following a link that appears in *ProviderAccess* Eligibility and Benefits for eligible members.

We hosted Timely Topics webinars in June about the transition to Magellan Rx Management. [Visit our Timely Topics web page to view or download a printable version of the Magellan Rx training presentation.](#)
